## MODERN DESIGN MEETS AUSTRALIAN RESILIENCE

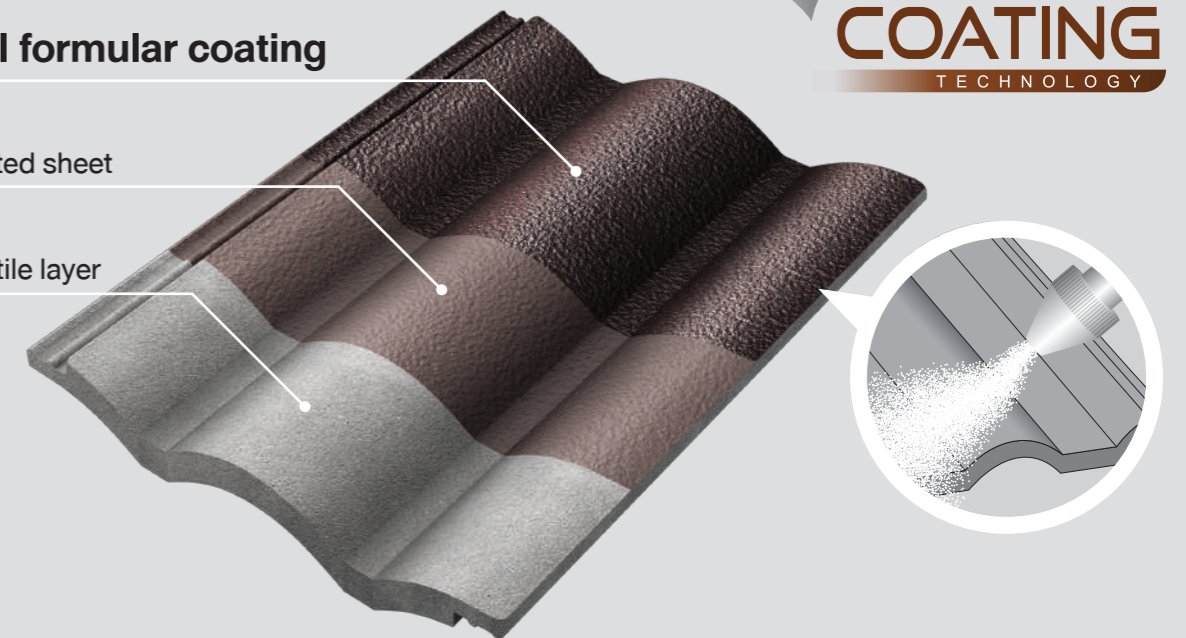

Engineered to rigorous standards, this concrete roof series blends contemporary architectural design with exceptional structural integrity. Specially developed for Australian homes, these tiles provide maximum protection against the continent's harsh weather extremes—from intense UV exposure to severe storm conditions.

Featuring advanced **Double Coating Technology**, the range ensures superior color longevity and surface durability, making it a high-value, long-term investment for any modern build.

## MORE DURABLE AND SHINIER COLORS WITH NEW TECHNOLOGY

Protect the vibrant color of your roof with advanced Double Coating Technology, delivering enhanced durability and long-lasting beauty. This system improves efficiency through a "wet-on-wet" spray painting process by applying paint while the tiles are still wet, to achieve a truly uniform color layer bonded with the concrete.

**SCG CONCRETE ROOF  
JEWEL C SERIES**

Onyx Black

**Contemporary Precision**

Protect the vibrant color of your roof with advanced Double Coating Technology, delivering enhanced durability and long-lasting beauty. This system improves efficiency through a “wet-on-wet” spray painting process by applying paint while the tiles are still wet, to achieve a truly uniform color layer bonded with the concrete.

**SCG CONCRETE ROOF  
SADIE E SERIES**

Shadow Grey

**Architectural Elegance**

A high-relief profile designed for deep texture and strong visual impact. SADIE E combines traditional aesthetics with modern engineering, ensuring efficient water management and a timeless look that enhances the character of any residence.

## SCG CONCRETE ROOF TRUE FLAT SERIES

Midnight Grey

### Minimalist Perfection

The premier choice for high-end minimalist architecture. TRUE FLAT delivers a perfectly smooth, slate-like finish with clean, seamless lines. It is designed for modern homes where a sleek, uniform appearance is essential, without compromising on resilience or weatherproofing.

## ROOFING ACCESSORIES

Our ridge capping system is engineered for maximum installation flexibility. It supports both traditional overlapping for a textured look and refined seamless-style fitting for a sleek, modern finish.

**Adaptable Design:** Fits perfectly with any laying pattern

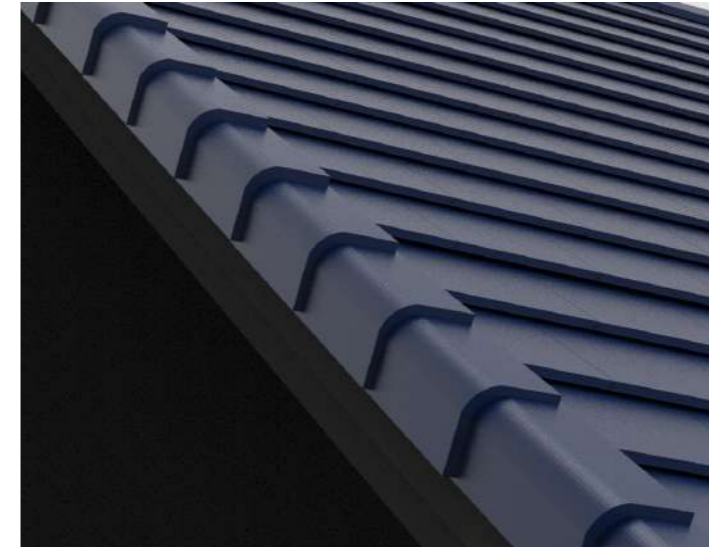

**Aesthetic Choice:** Choose between classic layers or a continuous, smooth silhouette

**Total Integration:** Guaranteed color match with SADIE E, JEWEL C, and TRUE FLAT

## PERFORMANCE & QUALITY ASSURANCE

### Advanced High-Pressure Engineering

Each tile is manufactured using precision high-pressure processing technology, ensuring maximum density and exceptional structural integrity. By utilizing specialized cement formulas and state-of-the-art machinery, the production process delivers consistent strength and durability that meet rigorous architectural requirements.

### International Standards & Compliance

The manufacturing facility operates under the **ISO 9001** quality management system. All products are engineered and tested to comply with international benchmarks, including **TIS 535-2556**, guaranteeing that every tile is built to withstand demanding environmental conditions while maintaining its form and function.

**NORMAL CONCRETE ROOF TILE**

Conventional surface treatment prone to early weathering and color fading.

**SCG CONCRETE ROOF TILE**

Enhanced with **Double Coating Technology**, providing a superior shield against UV radiation and environmental wear, maintaining a deep, vibrant finish for significantly longer.

# INSTRUCTIONS FOR SAFE USAGE

1. **Installation Standards:** Prior to installation, please study the technical manual in detail. Installation must be carried out by experienced and qualified roofers only.
2. **Surface Caution:** Concrete roof surfaces can be slippery, especially when wet or humid. Avoid walking on tiles during these conditions to minimize the risk of accidents.
3. **Height Safety:** Due to roof steepness, always use personal protective equipment (PPE), such as safety harnesses and life lines, during installation or maintenance.
4. **Cutting & Drilling:** Personal protective gear, including masks, gloves, earplugs, and safety goggles, must be worn at all times when cutting, grinding, or drilling tiles.
5. **Surface Maintenance:** Immediately clean the tile surface with a dry cloth after cutting to remove lime dust and prevent permanent staining.
6. **Design Specification:** These products are engineered for pitched roofing with slopes and angles as specified in the technical installation manual.
7. **Modification Warning:** Do not modify the product, such as applying non-approved coatings or insulation, as this may affect product performance and efficiency.

## IMPORTANT NOTICES

- **Color Variation:** Product colors illustrated in this catalogue are for advertising purposes and may differ from actual products due to the printing process. It is recommended to check physical samples before purchasing.
- **Environmental Exposure:** Product appearance and conditions may vary over time depending on local weather conditions and environmental factors.
- **Ordering Information:** To ensure color consistency across the entire roof, it is advised to purchase the total required quantity in a single order to receive tiles from the same manufacturing lot.

## ABOUT THE MANUFACTURER

SCG, the leading building materials manufacturer in ASEAN with over a century of heritage, is recognized for driving structural excellence and manufacturing innovation across the region. By bringing world-class standards and advanced coating technologies to Australian homes, SCG ensures every product delivers long-term value and uncompromising resilience.
